Skills

- **Languages:** Python, Java, C++, C
- **Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming (OOPS)
- **Data & ML:** EDA, Pandas, NumPy
- **Domains:** Data Analysis, Web Development
- **Database:** MySQL
- **Tools/Platforms:** Linux, VS Code, Git, GitHub
- **Soft Skills:** Problem-Solving, Time Management, Team Collaboration

Projects

Crop Prediction System | GitHub Jan' 26 – Feb' 26

- Developed a machine learning-based crop prediction system using historical agricultural datasets, achieving over 85% accuracy in identifying suitable crops based on soil and environmental conditions.
- Performed data preprocessing and exploratory data analysis on datasets with 20+ features, handling missing values and feature selection to improve data quality and enhance overall model performance.
- Implemented and evaluated 3+ machine learning models, optimizing accuracy by 10–15% through parameter tuning and validating results using standard performance metrics like accuracy and precision.
- **Tech Stack:** Python, Pandas, NumPy, Scikit-learn

Library Management System (CLI) | GitHub Nov' 25 – Dec' 25

- Designed and developed a command-line based Library Management System using Java OOP, organizing 100+ book records with modular design, scalability, and maintainable code structure.
- Implemented core functionalities including book addition, search, issue, and return operations, managing more than four modules with structured data management for efficient record processing.
- Structured the project using Maven for building automation and dependency management, and used Git and GitHub to manage 20+ commits and track version changes efficiently.
- **Tech Stack:** Java, Maven, Git, GitHub

Certificate Automation System | GitHub Oct'25 – Nov'25

- Designed and developed a full-stack Certificate Automation System using Flask (Python) and Oracle Database, enabling automated certificate generation with scalable and maintainable backend architecture.
- Implemented core functionalities including student data insertion, validation, and management using PL/SQL stored procedures and triggers, ensuring efficient and reliable record processing.
- Built dynamic certificate generation logic to auto-populate student details and generate certificates on demand, ensuring accuracy, consistency, and reduced manual effort.
- **Tech Stack:** Python, Flask, Oracle Database, PL/SQL

Training

Code Query: The Ultimate PL/SQL & Data Science Bootcamp | LPU | Certificate Jun' 25 - Jul' 25

- Completed a 50-hour industry-oriented bootcamp covering SQL, PL/SQL, and database design, strengthening knowledge of relational databases and real-world data management practices.
- Developed a web-based Certificate Automation System using Flask and SQL database for efficient storage, validation, and retrieval of student records with structured backend logic.
- Built a dynamic certificate generation system to auto-populate student details and generate certificates on demand, reducing manual effort by 70% and improving processing efficiency.

Certificates

- Cloud Computing – NPTEL Nov' 25
- Java Programming – Iamneo Edutech May' 25
- Data Structures and Algorithm – Iamneo Edutech Dec' 24
- Object Oriented Programming – Iamneo Edutech Dec' 24
- Computer Communication – Coursera | University of Colorado Nov' 24

Achievements

- Solved 100+ DSA problems on LeetCode covering Arrays, Strings, Hashing, Linked Lists, and basic Recursion
- Strong understanding of Data Structures and Algorithms with focus on problem-solving and optimization.
- Completed MERN stack program and earned badge from Cipher Schools.

Education

- **Lovely Professional University** Phagwara, Punjab
  Bachelor of Technology - Computer Science and Engineering; ***CGPA: 8.26*** *Aug' 23 - Present*
- **Matrix Sr. Sec. School** Sikar, Rajasthan
  Intermediate: ***Percentage: 82*** *Apr' 21 – Mar' 22*
- **Sukh Ram Memorial Public School** Hisar, Haryana
  Matriculation: ***Percentage: 88*** *Apr' 19 – Mar' 20*
